

Circular 10 / 2009

To: Ship Owners and/or Operators of Cargo Vessels, Powered Barges, Tugs, Utility Vessels & Dredgers over 300 GT; Deputy Registrars and Other Interested Parties

Subject: URGENT REMINDER Long Range Identification and Tracking of Ships (LRIT)

Date: 18 March 2009

For previous circulars on LRIT, please visit the Maritime Cook Islands website at <http://www.maritimcookislands.com/news.php>

Required Action by Owners/Operators

With immediate effect, Owners/Operators of vessels subject to SOLAS V/19-1 (who have not already done so) are urgently requested to register equipment for testing with an Authorized Testing Application Service Provider (ASP) appointed by Maritime Cook Islands (MCI). These are:

- **Pole Star Space Applications Limited (Pole Star)** Email: lrittesting@polestarglobal.com,
Phone: +44 (0)20 7313 7400 or Fax: +44 (0)20 7313 7401.
- **Fulcrum Maritime Systems Limited** Email: enquiries@fulcrum-maritime.com,
Phone: +44 1708 788400 or Fax: +44 1708 788402
- **Securewest International Incorporated** Email: info@securewest.com,
Phone: +1 757 461 4343 or Fax: +1 757 461 8666

Required Steps for Testing and Certification

1. Contact an ASP as soon as possible.
2. Once registration is complete, an activation code (Data Reporting and Polling Closed Network Identity or DNID) and other supplemental commands will be downloaded automatically to the vessel's chosen Inmarsat C Mobile Earth Station. This will activate the automatic LRIT transmissions.
3. Following activation, there will be a period of testing in line with guidelines contained in MSC.1/Circ.1257. This is necessary to ensure the transmitted data is accurate and reliable. This testing will be carried out remotely by the ASP. Upon successful completion, a test certificate will be issued. All vessels must hold such a certificate to comply with SOLAS V/19-1.

Vessels must be certified no later than 30 June 2009 or the date of the vessel's next Radio Equipment Survey after 1 January 2009.

About LRIT

SOLAS V/19-1 Long-Range Identification and Tracking of Ships (LRIT) requirements entered into force on 1 January 2008 and have a compliance date of 30 June 2009.

LRIT allows Maritime Cook Islands to receive position reports from vessels flying the Cook Islands flag from anywhere in the world. This also allows national governments an overview of vessels in their territorial waters and off their coastlines.

The regulation requires transmission of the following information for LRIT purposes:

- Identity of the ship (IMO Number and Vessel Name)
- Position of the ship (latitude and longitude)
- The date and time of the position

Application

LRIT equipment applies to the following vessels engaged in international voyages:

- Cargo Vessels, including High Speed Craft, equal to or over 300 GT
- Passenger ships, including High Speed Passenger craft
- Mobile Offshore Drilling Units
- Yachts equal to or over 300 GT, certified under the 'Large Yacht Code' or holding a Cargo Ship Safety Radio Certificate
- Powered Barges, Utility Vessels, Tugs and Dredgers equal to or over 300 GT

Those ships operating exclusively in sea area A1 and fitted with an Automatic Identification System (AIS) are exempt from LRIT regulations.

Technology

The following platforms are considered most suited to the transmission of LRIT data, in order of practical suitability:

- Inmarsat "Mini-C"-type Mobile Earth Station (as used for SSAS and / or commercial tracking applications);
- Secondary Inmarsat C Mobile Earth Station (typically the "back-up / redundant" GMDSS largely on stand-by);
- Primary Inmarsat C Mobile Earth
